

DEC 18 1979

38-05-15 **Name:** HALL'S MILL
Location: T528, Hopewell Township
UTM: Zone 17 **N** 4444770 **E** 728600 **Acreage:**
Owner: Bedford County

Stream: Yellow Creek
Truss Type: Burr
Builder:
Year: 1872

End Post to
End Post Length: 91'
Clearance: 12'

Road Surface
Width: 9' roadbed 12'6"
Load:

**Distinguishing
Features:**

This shallow gable roofed bridge has low sidewalls leaving trussing system open. Foundations of old Hall's Mill present at west end of bridge.

Condition:

Fair

Describe the present and original (if known) physical appearance

The remaining Bedford County covered bridges can be broken down into four distinctive visual types, even though only two different trussing systems are employed.

The open side wall type seems to be a regional variation and only known at this point in our survey from this county. The neighboring county of Somerset has approx. 16 covered bridges, some of these may also prove to be of a similar type.

Fifteen historic covered bridges remain today in Bedford County, however, only 14 will be nominated here. The Claycomb or Reynoldsville bridge has been moved and altered in recent years.

Type I Features: Burr arch truss (low to medium)
Shallow gable roof
X-bracing of roof
Low (3 plank) inner walls
High, vertical plank outer walls
Truss does not extend above side walls
(one exception, Ryot)
Four of the 5 in this category have an extra horizontal beam at eave level

Bridges of this Type:

Hewitt Covered Bridge	38-05-26	
Ryot Covered Bridge	38-05-17	
Snooks Covered Bridge	38-05-23	
McDaniels Covered Bridge	38-05-20	Removed 10/13/88
Jackson's Mill Covered Bridge	38-05-25	

Type II Features: Burr arch truss (medium)
Shallow gable roof
Low (3 plank) inner walls
Low vertical plank outer walls
X-bracing of roof
Horizontal beam bracing at top of burr arch

Bridges of this type :

Dr. Knisely's Covered Bridge	38-05-16
Diehl's Covered Bridge	38-05-19
Osterburg or Bowser's Covered Bridge	38-05-22

Covered Bridges of Bedford County

CONTINUATION SHEET

ITEM NUMBER 7 PAGE 2

Type III Features: Burr arch truss (high-eave level)
Medium pitched gable roof
X-bracing of roof
Low (3 plank) inner walls
High, vertical plank outer walls (exception,
Hall's Mill - no outer walls)

Bridges of this Type:

Felton's Mill Covered Bridge	38-05-03
Claycomb or Reynoldsville Covered Bridge	38-05-12 not nominated
Hall's Mill Covered Bridge	38-05-15
Heirline Covered Bridge	38-05-11

Type IV Features: Kingpost truss

Only two bridges employing the kingpost trussing system are present in Bedford County.

The Fischtner or Polo Alto bridge (38-05-21) has the typical kingpost trussing system. Horizontal beams also tie the trussing system members together as on type one bridges. This bridge also has low side walls.

The Calvin or Calvin Bridge (38-05-24) has a more unusual use of the kingpost system. This bridge has short diagonal braces which only come to the middle of the panel posts. Horizontal beams are tied to the panel posts where the diagonal braces end. A second set of diagonal braces begin above these beams but are tied to the cross-beams of the roof bracing. This is the only bridge of this type in Pennsylvania.

Other

New Paris or Cupperets Covered Bridge (38-05-18) is also an unusual bridge. Its extremely low burr arch is protected by low curving vertical siding leaving the bridge sidewalls open. Horizontal beams tie the end post and panel posts.

Builder/Architect

Statement of Significance (in one paragraph)

The covered bridge was once an important part of the transportation system of the county. Today only 15 of these wooden spans remain although records show that at least 5 known others once stood in the county and other accounts put the number as high as 74. This county was settled by numerous Indian trails and an early road forged by General John Forbes in 1758. The iron industry was an important economic venture in the county during the 19th century, however agriculture was and still remains of major importance

Unfortunately pictures of all the early bridges do not exist for comparative study with the remaining bridges. However, some distinctive regional features can be seen. These include the high presence of the use of the burr arch and the open side walls. The remaining bridges are an important survival of a transportation feature once common in Bedford County.
